

Amr Younis

Software Engineer & Supply Chain Coordinator

Dedicated and innovative Software Engineer with expertise in full-stack development and a strong academic background in Information Technology. Skilled in a wide range of programming languages and frameworks, particularly PHP (Laravel), JavaScript, and SQL databases and airtable . Demonstrated success in building and deploying scalable web applications, managing complex projects, and enhancing user experience through effective backend and frontend solutions. Recognized for exceptional problem-solving abilities, effective teamwork, and a commitment to delivering high-quality, user-centric software solutions. Fluent in English and Arabic, with a keen interest in continuous learning and professional growth.

Work experience

Culinary Supply & Inventory Assistant

March 2026

WCK (World Central Kitchen), Gaza

Current

- Coordinating daily supply chain operations for multiple kitchens to ensure uninterrupted food production.
- Managing food inventory levels and forecasting future requirements based on production plans.
- Monitoring supplier deliveries and verifying quantities, quality, and compliance with operational standards.
- Reviewing kitchen consumption reports and analyzing resource utilization to improve efficiency.
- Preparing operational and inventory reports to support management decision-making.
- Coordinating between warehouses, logistics teams, and kitchen operations to ensure timely distribution of supplies.
- Planning future procurement needs and maintaining optimal stock levels across all kitchens.

Systems and Websites Development & Management

January 2023

National Association for Electronic Services and Networking, Saudi Arabia , riyadh - Al-Malqa

January 2025

- Managed secure database systems to ensure robust data integrity for all.
- Engineered scalable web solutions to support high traffic volume periods.
- Directed website maintenance cycles to ensure maximum uptime performance.
- Led full-stack web development projects to boost user engagement levels.

Technical & Software Manager

November 2024

Majed Mamdouh Hammoud Al-Shammari Establishment, Saudi Arabia

Current

Managed the technical and software department, overseeing the development and implementation of digital solutions, web platforms, and software projects. Executed technical projects and services assigned to

the organization and its e-commerce platform, while coordinating technical requirements and ensuring efficient delivery of digital services.

Full-time Backend Developer (PHP LARAVEL)

April 2022
2023

Wasla

- Leading the development and maintenance of PHP Laravel-based applications, ensuring optimal performance and reliability.
- Collaborated closely with front-end developers to integrate backend functionalities smoothly, improving user experience.
- Enhanced system functionalities through API integrations, allowing for real-time data synchronization and improved client satisfaction.
- Worked on debugging and troubleshooting issues to maintain high-quality standards and minimize downtime.

PHP Laravel Developer

June 2021
October 2021

Technical Training

- Completed a technical training program focused on practical application of PHP Laravel for web development.
- Gained hands-on experience by working on real-world projects, developing comprehensive backend solutions.
- Learned best practices in coding standards, version control (Git), and deployment processes.
- Strengthened skills in teamwork and project collaboration, working alongside seasoned developers to deliver high-quality software.

Part-time PHP Laravel Developer

2021

Mars for Technology

- Worked as part of a cross-functional team to deliver secure and responsive web applications.
- Focused on developing backend components in PHP Laravel, including database integration, API development, and data handling.
- Improved existing codebase efficiency, reducing load times and enhancing overall application performance.
- Actively participated in team meetings to discuss project timelines, feature enhancements, and bug fixes, contributing to effective project management.

PHP Laravel Developer

2020

Vision Plus

- Built and customized web applications based on client requirements, primarily using PHP Laravel and related technologies.
- Contributed to project success by ensuring that all applications were scalable, secure, and aligned with user expectations.
- Developed and maintained clear, detailed documentation for each project, facilitating smoother updates and handovers.
- Delivered multiple projects successfully, receiving positive feedback from clients on functionality and user experience.

● Education

Bachelor of Engineering in Software Engineering

2018
2022

[Palestine University of Gaza](#)

GPA: 83%

● TRAINING COURSES

Advanced PHP Laravel Development

2021

Gained in-depth knowledge of PHP Laravel, focusing on advanced web development techniques, API integration, and backend optimization.

Full-Stack Web Development

2020

Comprehensive training covering frontend and backend development, including HTML, CSS, JavaScript, and PHP, as well as responsive design principles.

Git and Version Control

2019

Learned essential version control practices using Git and GitHub, enhancing collaboration and code management in team environments.

Database Management Systems (DBMS)

2019

Practical training on SQL Server and MySQL, including database design, query optimization, and data handling.

Problem-Solving and Analytical Skills in Programming

2018

Focused on debugging, algorithm design, and logical thinking, improving programming efficiency and problem-solving abilities.
